Caio Bento

Full Stack Developer | React, Next.js, TypeScript, Node.js | Java, Spring Boot | Python

Nova Friburgo, Brazil · Remote • +55 21 98985-4536 • caiobentoodev@gmail.com • linkedin.com/in/caiobentoo • github.com/caiobento7 • **caiobento.vercel.app**

SUMMARY

Full Stack Developer experienced in building web applications end to end with React, Next.js, TypeScript and Node.js, always on systems running in production. At Adapt Edtech, built interfaces and features for Adapt Liviu and Liviu Hub, education platforms used by schools and corporate L&D teams. At Nexly Group, owned every frontend interface in the company's B2B products and built integrations through REST APIs and webhooks, such as Silva Nutrition's first sales and support AI and the migration of 100k+ records to Supabase. Experienced in wiring frontends to APIs, relational databases (PostgreSQL and Supabase), dashboards and collaborative Git workflows.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, HTML, CSS, Angular, TailwindCSS
Backend & APIs: Java, Spring Boot, Node.js, Python, FastAPI, REST APIs, Webhooks, RabbitMQ, Supabase, PostgreSQL, SQL
Testing: JUnit 5, Testcontainers, pytest, Vitest, Playwright
Data: Large-scale migration, ETL with n8n, PostgreSQL, Apache Beam, WooCommerce API
Tooling & Process: Git, GitHub, GitHub Actions (CI), Docker, Vercel, Google Cloud (GCP), Scrum, Agile
Automation & AI: n8n, Conversational AI agents, LLMs in business workflows, RAG with pgvector, Claude API, WhatsApp Business API
Web automation: Python, Selenium, Playwright, requests
Infra & Support: AnyDesk, TeamViewer, Virtual machines, Active Directory (basics)

PROFESSIONAL EXPERIENCE

Adapt Edtech | Full Stack Developer

Jul 2026 – Nov 2026 · Remote

- Built Adapt Liviu, an education technology ecosystem for creating, managing and analyzing content, used by schools and corporate L&D teams, and Liviu Hub, the company's corporate learning platform
- Built the platform's core features with the team: company and student sign-up, a Canva-style visual course editor, learning paths, SCORM package import and export, and AI features for text review and image generation
- Web interfaces with React, Next.js and TypeScript, integrated with APIs and backend services
- Shipped features and improvements to production systems in an agile Scrum team, using Git and a collaborative workflow

Tech: React, Next.js, TypeScript, REST APIs, Scrum, Git

Nexly Group Solutions | Full Stack Developer & Automation

Jul 2025 – Aug 2026 · Remote

- Owned every frontend interface in the company, building React, Next.js and TypeScript web apps for B2B products in production, plus the website and online enrollment platform of Faculdade Maria Thereza (FAMATH)
- Designed and built Silvinha, Silva Nutrition's AI agent and the company's first sales and support AI, running on WhatsApp with WooCommerce integrations through REST APIs and webhooks
- Designed and shipped 10+ critical n8n automations, including the migration of 100,000+ records from WooCommerce to Supabase in a single optimized workflow
- Built an alerting system that monitors tool disconnections, preventing failures that would compromise the production database
- Dashboards and features for internal web apps, wiring the frontend to APIs and backend services
- Agile Scrum team with weekly sprints, Git and a collaborative workflow

Tech: React, Next.js, TypeScript, n8n, WooCommerce API, REST APIs, Webhooks, Supabase, Git, Scrum

Pixtrade.IO | Software Developer Trainee — May 2024 – Jun 2025 · Remote

- Built a support bot that triages and qualifies customers before human support, cutting average handling time from 20 to under 5 minutes
- Python and SQL scripts and automations to streamline internal processes
- Built and maintained integrations between systems and APIs for data processing
- Collaborated on data analysis and data handling solutions for the platform
- Remote user support via AnyDesk and TeamViewer

Tech: Python, SQL, APIs, AnyDesk, TeamViewer

Upwork | Full Stack Developer (Freelance) — Dec 2023 – Apr 2024 · Remote

- Built small web applications for clients end to end: requirements gathering, scoping, development and final delivery
- Owned the technical decisions and the direct communication with the client throughout each project

---

EDUCATION

B.Sc. in Computer Engineering (in progress): **Rio de Janeiro State University (UERJ)** · 2023 – 2027

PERSONAL PROJECTS (OPEN SOURCE)

Agenda: booking SaaS with Pix payments · Personal project · Full stack

A platform where barbershops, studios and personal trainers get their own booking page: customers pick a service and a time slot, pay a deposit via Pix and get an email confirmation and reminder.

Impact: 60 Vitest tests, run on PGlite and on a real PostgreSQL in CI, plus Playwright end-to-end tests on desktop and mobile.

Tech: Next.js, TypeScript, PostgreSQL, Drizzle, Mercado Pago, Vitest, Playwright · github.com/caiobento7/agenda

AI document assistant with citations · Personal project · Python, AI and hybrid search

Ask questions about company documents (handbook, policies, FAQ) and get Claude's answer with the exact page and sentence it came from. When nothing relevant is found, the model is not even called and the app says it doesn't know.

Impact: Hybrid search reaches 100% recall@3 on the gold questions, with 47 pytest tests running in memory and on PostgreSQL with pgvector in CI.

Tech: Python, FastAPI, PostgreSQL, pgvector, Claude API, Voyage AI, pytest, Docker · github.com/caiobento7/assistente-documentos

Integration hub with a queue and replay · Personal project · Java, Spring Boot and RabbitMQ

A service that connects an online store to an ERP: it receives orders through a signed webhook, queues them in RabbitMQ, maps them to the ERP format and delivers them, without losing or duplicating orders when the ERP goes down.

Impact: 26 tests, including the full flow against real RabbitMQ and PostgreSQL via Testcontainers in CI.

Tech: Java 21, Spring Boot, RabbitMQ, PostgreSQL, Testcontainers, Docker · github.com/caiobento7/hub-integracoes

Pix charges with an idempotent webhook · Personal project · Java and Spring Boot

An API that creates Pix charges (Brazil's instant payments) and settles them when the money arrives, never counting the same payment twice, even when the bank's webhook is repeated, out of order or lost.

Impact: 41 JUnit 5 tests, including 8 simultaneous webhooks for the same payment that settle the charge only once.

Tech: Java 21, Spring Boot, PostgreSQL, Flyway, JUnit 5, Docker, GitHub Actions · github.com/caiobento7/pix-cobrancas
